

Lean Canvas - BaaS

Title: **Business logic As A Service** Created By: _____ Date: _____

PROBLEM

- Hard to manage complex, ever changing business logic
 - Decentralized / scattered logic is not easy to verify and audit
 - Logic is embedded inside the code making it a technical effort instead of a business concern therefore slowing down the speed to market
 - Logic is in the custody of developers instead of Business / Analysts
- ### EXISTING ALTERNATIVES
- 
- Maintain an excel file containing logic in a shared folder
 - Maintain part of business logic in the database then expose a user interface

SOLUTION

- A 'No code' **business logic service** managed by Business
- A simple UI that allows users to use business language to define and manage logic
- Allow other systems to consult the business logic service using API Hence providing a single reference

KEY METRICS

- Number of post views
- Number of demos
- Number of free subscribers
- Number of paying subscribers

UNIQUE VALUE PROPOSITION

Let the business manage business logic. BaaS

HIGH LEVEL CONCEPT

Define and manage business logic without programming knowledge

UNFAIR ADVANTAGE

- Customer obsession
- Experience with insurance pain points and existing alternatives
- Speed: execution and runtime
- Advanced tech

CHANNELS

- Subscription - Freemium
- On Premise

CUSTOMER SEGMENTS

- Insurance companies
- Credit Providers
- Industry Regulators
- Startups

EARLY ADOPTERS

- Tech visionaries
- InsureTech
- Fintech
- Startups

COST STRUCTURE

- Cloud Provider Costs
- Developer Hours
- Marketing and Publicity
